Installation

 Battery: Unscrew the cap to install the battery, ensuring the positive end is facing forward. Caution: Incorrect installation may damage the scanner. Additionally, when removing the battery, support it with your thumb, as it may spring out due to the internal spring.

• **Cable Clip:** Insert the cable clip into the hand strap hole, turn to secure, and press firmly until locked. Finally, use the clasp to secure the cable as shown.

 Cradle: Connect USB-C cable and communication cable to the cradle as illustrated

Pairing the Device

Cradle Host Mode

- Connect the cradle and the computer using the cables. Please make sure the cradle LED is flashing blue indicating it's not linked to any scanner.
- 2. Power on the scanner and scan the following barcodes: Start Of Configuration, Cradle Host mode enable, and End Of Configuration to enable Cradle Host mode.

- 3. Scan the pairing barcode attached at the bottom of the cradle to begin pairing. 3 short beeps will be heard.
- The LED indicator on the scanner will flash blue rapidly indicating search mode in progress. LED on the cradle will become steady blue when the pairing is successful.
- 5. To set the host interface for the cradle, scan the corresponding barcode label found in the System Settings in the User's Manual.

BT HID/Smart Phone Mode

 Power on the scanner and program it with "BT HID Mode." To connect to a smart phone (ie. iPhone, Android), the Smart phone mode must also be enabled.

- 2. Enable wireless discovery on your smart phone. (see your phone's user's manual for instructions)
- The scanner should be on the list of discoverable devices. The default name of the scanner is "ZBBT". Select "ZBBT" from the list and a pin code will appear on your smart phone.
- 4. To input the pin code, use the scanner to scan the barcodes in the ASCII table found in the previous section. For example: if the pin code is "0111", scan "0", "1", "1" from the ASCII barcode labels.
- 5. Scan the Enter barcode in the ASCII table to confirm.
- 6. A short beep should be heard upon connection.

SPP Client Mode (PC as Host)

In this mode, the scanner is discoverable from a remote device and it can request the scanner for connection. There are several ways to connect the wireless scanner to your PC. Please check the corresponding guides for more details on how to configure your host device's wireless connections.

- 1. Turn on the host computer and activate its wireless connection.
- 2. Power on the scanner and program it with "SPP Client mode" label.

- 3. In the host computer, execute the discovering procedure and find the
- scanner.
- Scanner should be on the list of discoverable devices. The default name of the scanner is "ZBBT". Select "ZBBT" and click "Next".
- Select "Let me choose my own passkey" and enter the pin code. The default pin code is "12345678" (must be at least 4 digits and not more than 8 numeric digits).
- Click "Next" to connect the scanner to the host. A short beep should be heard upon connection.

SPP Host Mode (Scanner as Host)

In this mode, the scanner initiates the connection to the remote device.

- 1. Power on of the remote device and have its address ready in hand and make it discoverable.
- 2. Program the scanner with the "SPP Host enable" barcode.

3. Scan "Set wireless address" to set the address.

- 4. Use the ASCII table provided in the preceding section to input the 12-digit wireless address. For instance, if the address reads "011B1345600," proceed by scanning the corresponding ASCII barcode labels: "0," "0," "1," "1," "B," "1," "3," "4," "5," "6," "0," "0." Alternatively, if an address label is accessible, simply scan it instead.
- 5. Scan "Confirm Setting" to store the address.

6. Scan "End" to finish the setup.

7. If necessary, set up and input the pin code (For details, please see User's Manual). Finally. scan "Required Pair with client (SPP Host)" to begin pairing.

Required Pair with client (SPP Host)
